

Kumar Shivam

Lead Product Analyst · 4+ years in Product Analytics, Experimentation & Data Science

✉ kumarshivamdsdl@gmail.com · ☎ +91 9471621193 · in linkedin.com/in/kumar-shivam- · ̀ github.com/shivam5600

EDUCATION

Indian Institute of Technology Varanasi (IIT BHU) BTech — Engineering (CPI: 8.36)

05/2019 – 05/2023

SKILLS & TOOLS

Data & Analytics	SQL (Advanced) · Python (pandas, NumPy, scikit-learn) · Statistical Analysis & Hypothesis Testing · A/B Testing & Experiment Design · Cohort & Funnel Analysis · RCA · KPI Design
Platforms & BI	Tableau · MixPanel · Databricks · Spark · Elasticsearch · CleverTap · Excel (Advanced)
Engineering & AI	LLM / Prompt Engineering · Vibe Coding · Machine Learning · Flask · Chart.js
Product & Leadership	Product Discovery · Stakeholder Management · Roadmapping · Data Storytelling · Cross-functional Collaboration · Ownership

PROFESSIONAL EXPERIENCE

Lead Product Analyst @ media.net

11/2023 – Present · Mumbai, India

media.net — one of the largest contextual advertising companies worldwide; real-time bidding at web scale.

- Turned ambiguous revenue questions into **testable hypotheses** on billions of bid-level rows/day; identified overbidding/underbidding anomalies driving **~\$300K/month in missed opportunity**, and partnered with Data Science to deploy a mitigation model that **cut overbidding by ~35%** and delivered **+\$125K/month (\$1.5M/year)** in net revenue, compounding with each iteration.
- Reversed **revenue-impacting domain blocks** caused by missing IP coverage via domain-level trust signals; ran an A/B experiment restoring **\$2K/day (\$0.7M/year)** and reshaping the traffic-filtering strategy.
- Designed and evaluated a **guarded A/B experiment** after RCA showed ~5% of traffic drove 98% of revenue; rolled out filtering that blocked 99% of non-valuable traffic on targeted domains → **~15% infra-cost reduction (~\$0.6M/year)**, now scaled company-wide as an ongoing efficiency program.
- Led multiple **Tier-1 user-journey cohort analyses** (incl. WebMD health cohort, 100K+ users, 30-day windows) — built a 7-segment behavioural classification over Pre / D0 / Post windows and quantified a **\$4.91 per 1000-impression revenue gap** between T1 search RPM and NT1 external-bidder RPM, with search-bidder share collapsing from 21% (D0) to 6% (NT1 post-D0); surfaced a **~\$3M/year cross-bidder revenue opportunity** and informed the search-side product strategy and bidder-coverage roadmap.
- Solved a chronic bid-request debugging pain for Product & Data Science teams by shipping the **Prog Data Discovery Tool (now LIVE in production)** — an internal analytics platform that replaces hours of manual Kibana digging with one-click field coverage, distribution & cross-entity comparison across ad-exchange integrations (EBDA, ADX, PREBID, TAM); **built the UI and core analytics logic via LLM-assisted development** and owned production deployment end-to-end.

Product Analyst @ MPL (Mobile Premier League)

01/2022 – 10/2023 · Bangalore, India

MPL — largest eSports & mobile gaming platform, \$2.8B valuation.

- Drove **user-behaviour analytics & nudge experimentation** across tens-of-millions of MPL users — hypothesised a losing-streak → churn correlation, validated through **cohort & survival analysis** on in-game event logs, then shipped a real-time nudge experiment (targeted pop-ups + bonus-coin incentives after the 4th consecutive loss); A/B-tested across multiple game cohorts with statistical-significance checks on guardrail metrics, reducing churn, lifting D7/D30 retention, and generating **~10% incremental platform-level CM1** after multi-game rollout.
- Initiated **New User Deposit Transformation for USA geography** — ran **funnel & cohort decomposition** on the acquisition → first-deposit journey (~3% baseline), identified friction points, and shipped a 24-hour time-bound deposit-incentive feature; A/B-tested across US sign-up cohorts, lifting **first-deposit conversion ~3% → ~8%**, reducing early-stage churn, and becoming the **standard US onboarding offering** for new users.
- Ran **dynamic infra-cost optimisation** on AWS / Databricks — cluster policies, job configurations and orchestration patterns reduced infrastructure spend by **61% (~\$135K/month)**.

ACHIEVEMENTS

Promoted to Lead Product Analyst — fastest to earn the Lead title (~1.2 years) at media.net.

01/02/2025

Best Project Award 2022–23 @ MPL — recognised by CEO for the Infra Cost Reduction initiative.
